

Landscaper (hand-guided)

RS 50 H II

*practical
safe
reliable
durable, robust
convenient, safe
economical*

Specifications	RS 50 H II
Working width	50 cm
Net. Weight	63 kg
Seed container-approx. Content	40 Ltr.
Approx. l/w/h (with guide beam)	1,270/590/940

Four Jobs in one Process

SEMBDNER landscapers allow perfect lawn seeding through the well proven seed concept which we developed in co-operation with our customers. The compact construction and the renown durability of our products are the reason for the great national and international success of SEMBDNER landscapers.

- Pre-rolling

The grid front roller simultaneously serves as drive for the brush roller.

- Sowing

The sowing occurs through a flexible nylon brush, which is impervious to foreign particles. A scale with a shut off device delivers seeding rates precise to the gram.

• Raking the seed into the surface

The chain-driven seed dibbler works evenly and without problems. The dibbler is float-mounted and can be set to transport position quickly and easily by means of a bracket.

• Rolling

The pressure roller „compacts“ the soil surface and embeds the seeds evenly, allowing faster germination.

The dibbler is set to transport position by operating the **bracket**.

The **dibbler drive** is propelled via a chain and is protected by a cover:

A detachable, robust **weight box** that can be filled with various minerals (sand, stones) is located above the flat pressure roller.

Sowing takes place via a **Nylon brush**. The adjusting lever serves infinitely variable opening of the bottom run-off plate.
